Low Power Bluetooth Module

ABBTM-NVC-MDCS71

19.5 x 12.5 x 2.4 mm SMT

Pb | **RoHS/RoHS II compliant**

Moisture Sensitivity Level (MSL) – Level 3

▷ **FEATURES:**

• Single mode Bluetooth v4.1 low energy
• 4 dBm TX power/ -92.5dBm RX sensitivity, RSSI monitoring for proximity applications
• Supports master and slave
• Support GATT-based Profile: Proximity, Find Me, Heart Rate, HID and etc.
• UART/I2C master/SPI master interfaces
• 9 digital PIOs/3 analog IOs
• 10bit ADC IOs
• Wakeup interrupt and watchdog timer
• SMT pads for easy and reliable PCB mounting, Internal chip antenna
• 19.50x12.50x2.4mm
• FCC ID: OC3BM1871*
• QDID: B020997*

*Note: ABBTM-NVC-MDCS71 crosses to NovaComm P/N: NVC-MDCS71. BQB/FCC certification documentation is under
P/N: NVC-MDCS71.

▷ **APPLICATIONS:**

• Sports and fitness
• Healthcare
• Home entertainment
• Office and mobile accessories
• Automotive
• Commercial
• Watches
• Human interface devices

▷ **GENERAL DESCRIPTION**

ABBTM-NVC-MDCS71 is a single-mode Bluetooth 4.1 low power module, based on NovaComm's proprietary technology. Using the CSR's uEnergy platform, it enables ultralow power connectivity and basic data transfer for applications previously limited by the power consumption, size constraints and complexity of other wireless standards. It contains everything required to create a Bluetooth low energy product with RF, baseband, MCU, qualified Bluetooth V4.1 stack and customized firmware on a single module.

The module can be power directly with a standard 3V coin cell batteries or pair of AAA batteries. In lowest power sleep mode it consumes only 600nA and will wake up in few hundred microseconds.

▷ **PIN CONFIGURATION:**

▷ PIN DESCRIPTION

Pin	Symbol	I/O Type	Description
1	GND	Ground	Ground
2	AIO2	Bidirectional analogue	10bit Analogue programmable I/O line
3	AIO1	Bidirectional analogue	10bit Analogue programmable I/O line
4	AIO0	Bidirectional analogue	10bit Analogue programmable I/O line
5	UART_TX	CMOS output, tri-state, with weak internal pull-up	UART data output
6	UART_RX	CMOS input with weak internal pull-down	UART data input
7	PIO3	Bi-directional with programmable strength internal pull-up/down	Programmable input/output line PWM or LED Controls
8	PIO4	Bi-directional with programmable strength internal pull-up/down	Programmable input/output line PWM or LED Controls
9	GND	Ground	Ground
10	PIO5/SPI_CLK	Bi-directional with programmable strength internal pull-up/down	Programmable input/output line Or debug SPI_CLK select by SPI_PIO_SEL
11	PIO6/SPI_CSB	Bi-directional with programmable strength internal pull-up/down	Programmable input/output line Or debug chip select, selected by SPI_PIO_SEL
12	PIO7/SPI_MOSI	Bi-directional with programmable strength internal pull-up/down	Programmable input/output line Or debug SPI_MOSI, selected by SPI_PIO_SEL
13	VDD_PIO	Powered	PIO power supply
14	PIO8/SPI_MISO	Bi-directional with programmable strength internal pull-up/down	Programmable input/output line Or debug SPI_MISO, selected by SPI_PIO_SEL
15	I2C_SDA	Bi-directional tri-state with weak internal pull-up	I2C data input/output or SPI serial flash data output(SF_OUT)
16	I2C_SCL	Input with weak internal pull-up	I2C clock or SPI serial flash clock output (SF_CLK)
17	GND	Ground	Ground
18	PIO9	Bi-directional with programmable strength internal pull-up/down	Programmable input/output line PWM or LED Controls
19	PIO10	Bi-directional with programmable strength internal pull-up/down	Programmable input/output line PWM or LED Controls
20	PIO11	Bi-directional with programmable strength internal pull-up/down	Programmable input/output line
21	SPI_PIO_SEL	Input with strong internal pull-down	Selects SPI debug on (8:5)
22	VDD_BAT	Power supply	Button cell battery or DC 1.8V to 3.6V
23	GND	Ground	Ground
24	WAKE	Input has no internal pull-up or pull-down use external pull-down	Set high to wake the module from hibernate. Use an external pull-down for this pin.
25	GND	Ground	Ground

Low Power Bluetooth Module

ABBTM-NVC-MDCS71

Pb | **RoHS/RoHS II compliant**

19.5 x 12.5 x 2.4 mm SMT

▷ ELECTRICAL CHARACTERISTICS

Absolute Maximum Rating

Rating	Min	Max	Unit
Storage Temperature	-40	+85	°C
Battery (VDD_BAT) operation*	1.8	3.6	V
I/O supply voltage	-0.4	+3.6	V
Other Terminal Voltages except RF	Vss-0.4	VDD+0.4	V

* Short-term operation up to a maximum of 10% of product lifetime is permissible without damage, but output regulation and other specifications are not guaranteed in excess of 4.2V.

Recommended Operating Conditions

Operating Condition	Min	Typ	Max	Unit
Operating Temperature Range	-30		+85	°C
Battery (VDD_BAT) operation	1.8		+3.6	V
I/O Supply Voltage (VDD_PIO)	1.2		+3.6	V

Power Consumptions

The current consumption are measured at the VDD_BAT.

Mode	Description	Total typical current at 3V (average)
Dormant	All functions are shutdown. To wake up toggle the WAKE pin	<600nA
Hibernate	All functions are shutdown except for the sleep clock. The module can wake up on a timer on the sleep clock.	<1.5uA
Fast Advertising	In 30 second after Power on VDD=3.3V	0.8mA
Slow Advertising	In 3 minutes after fast advertising VDD=3.3V	6uA
Standby (no connect)	VDD=3.3V ,VDD_PIO=3.3v	5uA
Standby (connect)	VDD=3.3V ,VDD_PIO=3.3v	8uA
Transmit data	VDD=3.3V VDD_PIO=3.3V	1mA
RF RX /TX active (0dBm) *	VDD=3.3V VDD_PIO=3.3V	~16mA peak

* Note: The TX power of the module can be increased by firmware to a maximum of 4dBm and the peak current is around 28mA.

▷ I/O CHARACTERISTICS

Digital I/O Characteristics

Supply Voltage Levels	Min	Typ	Max	Unit
Input Voltage Levels				
V_{IL} input logic level low	-0.4		0.4	V
V_{IH} input logic level high	0.7*VDD		VDD + 0.4	V
T_r/T_f			25	ns
Output Voltage Levels				
V_{OL} output logic level low, $I_{OL} = 4.0mA$			0.4	V
V_{OH} output logic level high, $I_{OH} = -4.0mA$	0.75*VDD			V
T_r/T_f			5	ns
Input and Tri-state Current				
With strong pull-up	-150	-40	-10	μA
With strong pull-down	10	40	150	μA
With weak pull-up	-5.0	-1.0	-0.33	μA
With weak pull-down	0.33	+1.0	5.0	μA
C_I Input Capacitance	1.0		5.0	pF

AIO Characteristics

Input Voltage Levels	Min	Typ	Max	Unit
AIO	0		1.3	V

ESD Protection

Condition	Class	Max Rating
Human Body Model Contact Discharge per JEDEC EIA/JESD22-A114	2	2000V (all pins)
Machine Model Contact Discharge per JEDEC EIA/JESD22-A115	200V	200V (all pins)
Charged Device Model Contact Discharge per JEDEC EIA/JESD22-C101	III	500V (all pins)

▷ PHYSICAL INTERFACES

Power Supply

The module integrates internal regulators. It can be easily powered up by connecting a 3V coin battery with a >100uF capacitor at pin VDD_BAT.

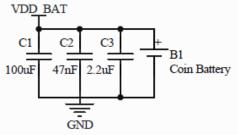

Figure 2. Capacitor at pin VDD_BAT

Internal Antenna

The module integrates an on-board chip antenna. There's no need to use external antenna on customer's PCB. Please take precaution to leave ample clearance for the antenna (See Figure 6).

PIO

9 PIOs are provided (4 are multiplexed with SPI debug interface). They are powered from VDD_PIO.

PIO lines are software-configurable as weak pull-up, weak pull-down, strong pull-up or strong pull-down.

Note: At reset all PIO lines are inputs with weak pull-downs. Any of the PIO lines can be configured as interrupt request lines or as wake-up lines from sleep modes.

AIO

3 AIOs are provided. They can be connected to internal 10 bits ADC. Depending on the software, they can be used to read or output a voltage between 0V to 1.3V. Each of them can be also used as a digital output with special firmware.

PWM

PIO3, PIO4, PIO9, PIO10 can be driven by internal PWM module. The PWM module also works while the module is sleep. Therefore it can be used as a LED flasher. These functions are controlled by special firmwares.

UART

This module has a standard UART interface which provides a simple mechanism for communicating with other serial devices using the RS232 protocol.

The UART CTS and RTS signals can be assigned to any PIO pin by the on-chip firmware.

Possible UART Settings

Parameter		Possible Values
Baud Rate	Minimum	1200 baud (≤2%Error)
		9600 baud (≤1%Error)
	Maximum	2M baud (≤1%Error)
Flow Control		RTS/CTS or None
Parity		None, Odd or Even
Number of Stop Bits		1 or 2
Bits per Byte		8

Pb | **RoHS/RoHS II compliant**

19.5 x 12.5 x 2.4 mm SMT

▷ **PHYSICAL INTERFACES**

I^{2}C Master

The module can act as an I^{2}C master when configured by software. Any two PIOs can be configured as I2C_SCL and I2C_SDA.

SPI Master

The module can act as an SPI master (mode 0) when configured by software. Any four PIOs can be configured as SPI_CLK, SPI_CS#, SPI_DIN and SPI_DOUT. The clock rate of the software SPI is around 470kHz.

SPI Debug

The SPI Debug interface is chosen when SPI_PIO_SEL is high. The interface is used to program and debug the module. So always place test points or header on PCB for this interface and SPI_PIO_SEL.

▷ **SOFTWARE STACK**

ABBTM-NVC-MDCS71 is a single mode Bluetooth 4.1 module. It can support all GATT-based profiles. Several profiles have been developed such as Healthy Thermometer Profile. Please contact Abracon for the support of more profiles and applications with iNovaLE stack.

▷ LAYOUT AND SOLDERING

Soldering Recommendations

ABBTM-NVC-MDCS71 is compatible with industrial standard reflow profile for Pb-free solders. The reflow profile used is dependent on the thermal mass of the entire populated PCB, heat transfer efficiency of the oven and particular type of solder paste used. Please refer to the datasheet of the particular solder paste for profile configurations.

The following are recommended for soldering the module to ensure reliable solder joint and operation of the module after soldering. Since the profile used is process and layout dependent, the optimum profile should be studied case by case. Thus following recommendation should be taken as reference only.

- Refer to technical documentations of particular solder paste for profile configurations

- Avoid using more than one flow.

- Reliability of the solder joint and self-alignment of the component are dependent on the solder volume. Minimum of 150µm stencil thickness is recommended.

- Aperture size of the stencil should be 1:1 with the pad size.

- A low residue, "no clean" solder paste should be used due to low mounted height of the component.
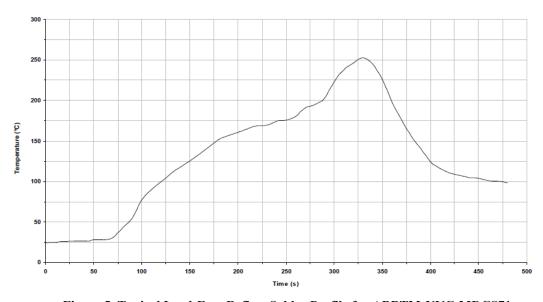

▷ REFLOW PROFILE

Figure 5. Typical Lead-Free Reflow Solder Profile for ABBTM-NVC-MDCS71

Key features of the profile:

- Initial Ramp = 1-2.5°C/sec to 175°C ±25°C equilibrium

- Equilibrium time = 60 to 180 seconds

- Ramp to Maximum temperature (250°C) = 3°C/sec max.

- Time above liquidus temperature (217°C): 45-90 seconds

- Device absolute maximum reflow temperature: 255°C

▷ PHYSICAL INTERFACES

Layout Guideline

It is strongly recommended to use good layout practices to ensure proper operation of the module. Placing copper or any metal near antenna deteriorates its operation by having effect on the matching properties. Metal shield around the antenna will prevent the radiation and thus metal case should not be used with the module. Use grounding vias separated maximum 3 mm apart at the edge of grounding areas to prevent RF penetrating inside the PCB and causing an unintentional resonator. Use GND vias all around the PCB edges. Figure 4 illustrates recommended PCB design around the antenna of ABBTM-NVC-MDCS71 when the module is placed at the edge of a PCB.

Do not place copper on the top layer under the module, as shown in Figure 6. The module has vias on the area shown, which can cause short circuit if there is copper underneath. Any metal placed closer than 20 mm in any direction from the antenna changes the matching properties and thus will considerably deteriorate the RF performance of the module.
