

Two output type with current limiting and reinforced insulation

PhotoMOS®
GU 2 Form A
Current Limiting (AQW210HL)

mm inch

RoHS compliant

FEATURES

- 1. Current Limiting Function**
To control an over current from flowing, the current limit function has been realized. It keeps an output current at a constant value when the current reaches a specified current limit value.
- 2. Enhances the capability of surge resistance between output terminals**
The current limit function controls the ON time surge current to enhance the capability of surge resistance between output terminals.
- 3. Reinforced insulation of 5,000 V**
More than 0.4 mm internal insulation distance between inputs and outputs. Con-forms to EN41003, EN60950 (reinforced insulation).
- 4. Applicable for 2 Form A use as well as two independent 1 Form A use.**
- 5. Controls low-level analog signals**

- 6. High sensitivity and high speed response.**
Can control max. 0.12 A load current with 5 mA input current. This enables fast operation speed of typ. 0.5 ms
- 7. Low-level off state leakage current**

TYPICAL APPLICATIONS

- Telephone equipment
- Modem

12. Output capacitance vs. applied voltage characteristics

Measured portion: between terminals 5 and 6, 7 and 8; Frequency: 1 MHz; Ambient temperature: 25°C 77°F

What is current limit

When a load current reaches the specified output control current, a current limit function works against the load current to keep the current a constant value.

The current limit circuit built into the PhotoMOS thus controls the instantaneous load current to effectively ensure circuit safety.

This safety feature protects circuits downstream of the PhotoMOS against over-current.

But, if the current-limiting feature is used longer than the specified time, the PhotoMOS can be destroyed. Therefore, set the output loss to the max. rate or less.
