Ultra-Low-Power Voltage Detectors and µP Supervisory Circuits

MAX6461–MAX6466

General Description

The MAX6461–MAX6466 family of ultra-low-power voltage detectors and µP reset supervisory circuits monitors battery, power-supply, and system voltages. Each circuit includes a precision bandgap reference, a comparator, internally trimmed resistor networks that set specified trip thresholds, and an internal 5% threshold hysteresis circuit (see the *Functional Diagram*). Output is asserted when V_{CC} falls below the internal V_{TH-} and remains asserted until V_{CC} rises above V_{TH+} ($V_{TH+} = V_{TH-} \times 1.05$). These devices provide excellent circuit reliability and low cost by eliminating external components and adjustments when monitoring nominal system voltages from +1.6V to +5.5V. The MAX6461/MAX6462/MAX6463 are voltage detectors with a propagation delay of 17µs.

The MAX6464/MAX6465/MAX6466 are µP supervisory circuits with a minimum reset timeout period of 150ms. All devices are available with thresholds from +1.6V to +5.5V in 100mV increments.

The family is available with three output stage options: push-pull with active-low output, push-pull with active-high output, and open drain with active-low output. These devices are available in SC70 and SOT23 packages specified over the -40°C to +125°C temperature range.

Applications

Precision Battery Monitoring

Load Switching/Power Sequencing

Power-Supply Monitoring in Digital/Analog Systems

Noise-Immune µP Reset Circuits

Portable/Battery-Powered Equipment

Cellular Phones/Cordless Phones

PDAs

Portable Medical Devices

Features

♦ **Ultra-Low 1.0µA Supply Current**

♦ **Preset Thresholds from +1.6V to +5.5V in 100mV Increments**

♦ **Internal 5% Threshold Hysteresis**

♦ **±2.5% Threshold Accuracy Over Temperature**

♦ **Internal Timeout Period Option (150ms min)**

♦ **Immune to Short Voltage Transients**

♦ **No External Components**

♦ **Available in Three Output Options: Push-Pull (Active Low/Active High) and Open Drain (Active Low)**

♦ **Fully Specified from -40°C to +125°C**

♦ **Small SC70 and SOT23 Packages**

Ordering Information

PART	TEMP RANGE	PIN-PACKAGE
MAX6461XR_ _-T	-40°C to +125°C	3 SC70-3
MAX6461UR_ _-T	-40°C to +125°C	3 SOT23-3

MAX6462XR_ _-T	-40°C to +125°C	3 SC70-3
MAX6462UR_ _-T	-40°C to +125°C	3 SOT23-3
MAX6462UK_ _-T	-40°C to +125°C	5 SOT23-5

The MAX6461–MAX6466 are available in factory-set thresholds from 1.6V to 5.5V in approximately 100mV increments. Choose the desired voltage threshold suffix from Table 1 and insert it in the blank spaces in the part number. There are 30 standard versions with a required order increment of 2500 pieces. Sample stock generally is held on the standard versions only (Table 2). Nonstandard versions require a 10k-piece order increment. Contact factory for availability. All devices available in tape-and-reel only.

Devices are available in both leaded and lead-free packaging. Specify lead-free by replacing "-T" with "+T" when ordering.

Ordering Information continued at end of data sheet.
Selector Guide appears at end of data sheet.

Functional Diagram

Detailed Description

The MAX6461/MAX6462/MAX6463 voltage detectors and the MAX6464/MAX6465/MAX6466 µP supervisory circuits monitor battery, power-supply, and system voltages from +1.6V to +5.5V. These devices consume only 1µA of supply current with a 3.6V supply voltage. Whenever V_{CC} falls below the internal V_{TH-} threshold, the output is asserted and remains asserted until V_{CC} rises above V_{TH+} ($V_{TH+} = V_{TH-} \times 1.05$). All devices have ±2.5% threshold accuracy over temperature and offer protection to short voltage transients. These devices are ideal for low-cost and space-critical applications because they do not require external components for proper operation.
MAX6461–MAX6466

Figure 1. Interfacing to Different Logic Voltage Components

_____Applications Information

Interfacing to Different Logic Voltage Components

The MAX6463 and MAX6466's active-low, open-drain output versions can be used to interface with a different logic voltage than V_{CC}, as shown in Figure 1. This output structure sinks current when $\overline{OUT}$ is asserted. Connect a pullup resistor from $\overline{OUT}$ to any supply from 0 to 6V. Select a resistor value large enough to allow a valid logic low (see the *Electrical Characteristics*) and small enough to register a logic high while supplying all input current and leakage paths connected to the $\overline{OUT}$ pin.

Hysteresis

The MAX6461–MAX6466 feature internal hysteresis that creates two trip points: one for rising supply voltage and one for falling supply voltage. The hysteresis prevents the output from oscillating (chattering) when V_{CC} is near the voltage threshold.

Transients Immunity

These devices are relatively immune to short-duration and falling V_{CC} transients (glitches). The *Typical Operating Characteristics* show the Maximum Transient Duration vs. Threshold Overdrive graph, for which $\overline{OUT}$ is not asserted. The graph shows the maximum pulse width that a falling V_{CC} transient typically might have before the devices are asserted. As the amplitude of the transient increases, the maximum allowable pulse width decreases.

Ensuring Valid Output Down to 0V

When V_{CC} falls below 1V, the MAX6461/MAX6464 output sinking capability is reduced. Therefore, high-impedance CMOS logic inputs connected to $\overline{OUT}$ can drift to undetermined voltages. This presents no problem in most applications, because most circuitry is inoperative when V_{CC} is below 1V. In applications where $\overline{OUT}$ must be valid down to ground, add a pulldown resistor to ground so any stray leakage currents flow to ground, holding $\overline{OUT}$ low. Select a resistor large enough not to load $\overline{OUT}$ and small enough to pull $\overline{OUT}$ to ground. For most applications, 100kΩ does not load $\overline{OUT}$ and pulls $\overline{OUT}$ to ground.

Selector Guide

PART	PUSH-PULL $\overline{OUT}$	PUSH-PULL OUT	OPEN-DRAIN $\overline{OUT}$	TYPICAL PROPAGATION DELAY (µs)	MINIMUM TIMEOUT PERIOD (ms)
MAX6461	✔	—	—	14	—
MAX6462	—	✔	—	14	—
MAX6463	—	—	✔	14	—
MAX6464	✔	—	—	—	150
MAX6465	—	✔	—	—	150
MAX6466	—	—	✔	—	150

Ultra-Low-Power Voltage Detectors and µP Supervisory Circuits

__Ordering Information (continued)

PART	TEMP RANGE	PIN-PACKAGE
MAX6463XR_ _-T	-40°C to +125°C	3 SC70-3
MAX6463UR_ _-T	-40°C to +125°C	3 SOT23-3
MAX6463UK_ _-T	-40°C to +125°C	5 SOT23-5
MAX6464XR_ _-T	-40°C to +125°C	3 SC70-3
MAX6464UR_ _-T	-40°C to +125°C	3 SOT23-3
MAX6464UK_ _-T	-40°C to +125°C	5 SOT23-5
MAX6465XR_ _-T	-40°C to +125°C	3 SC70-3
MAX6465UR_ _-T	-40°C to +125°C	3 SOT23-3
MAX6465UK_ _-T	-40°C to +125°C	5 SOT23-5
MAX6466XR_ _-T	-40°C to +125°C	3 SC70-3
MAX6466UR_ _-T	-40°C to +125°C	3 SOT23-3
MAX6466UK_ _-T	-40°C to +125°C	5 SOT23-5

The MAX6461–MAX6466 are available in factory-set thresholds from 1.6V to 5.5V in approximately 100mV increments. Choose the desired voltage threshold suffix from Table 1 and insert it in the blank spaces in the part number. There are 30 standard versions with a required order increment of 2500 pieces. Sample stock generally is held on the standard versions only (Table 2). Nonstandard versions require a 10k-piece order increment. Contact factory for availability. All devices available in tape-and-reel only.

Devices are available in both leaded and lead-free packaging. Specify lead-free by replacing "-T" with "+T" when ordering.

__Chip Information

TRANSISTOR COUNT: 581
PROCESS: BiCMOS
