

## Surge Metal Film Leaded Resistor

A multi layer metal film is deposited on a high grade ceramic body. After a helical groove has been cut in the resistive layer, tinned electrolytic copper wires are welded to the end-caps. The resistors are coated with a light blue non-flammable lacquer, which provides electrical, mechanical, and climatic protection.

The encapsulation is resistant to all cleaning solvents in accordance with IEC 60068-2-45.

**MARKING**

The nominal resistance and tolerance are marked on the resistor using three colored bands for ± 20 % tolerance and four bands for ± 10 % tolerance in accordance with IEC 60062, marking codes for resistors and capacitors. Standard values of nominal resistance are taken from the E12 series for resistors with a tolerance of ± 10 % or ± 20 %. The values of the E12 series are in accordance with IEC 60063.

**FUNCTIONAL PERFORMANCE**

**Derating - Standard Operation**

Maximum dissipation ( $P_{max}$ ) in percentage of rated power as a function of ambient temperature ( $T_{amb}$ )

**PULSE LOADING CAPABILITY**

Pulse on a regular basis; maximum permissible peak pulse power ( $P_{max}$ ) as a function of pulse duration ( $t_i$ ) for single pulse condition

**TESTS AND REQUIREMENTS**

Essentially all tests are carried out in accordance with IEC 60115-1, category 55/155/56 (rated temperature range - 55 to + 155 °C; damp heat, steady state, 56 days). The tests are carried out in accordance with IEC 60068-2-xx.

Test method under standard atmospheric conditions according to IEC 60068-1, 5.3. In the Test Procedures and Requirements table the tests and requirements are listed with reference to the relevant clauses of IEC 60115-1 and IEC 60068-2-xx test methods. A short description of the test procedure is also given. In some instances deviations from IEC applications were necessary for our specified method.
