# 1.0 mm Pitch, Board-to-Wire LCD Interface Connectors

## MDF76 Series

### ■ Increased Plug / Receptacle retention force

### ■ Features

#### 1. High-speed data transfer

Ground contacts opposite the signal contacts (Receptacle) provide superior impedance matching.

#### 2. EMI protection

Metal shell provides shielding and ground connections.

#### 3. Increased Plug / Receptacle retention force

Unique configuration of the receptacle ground contacts mating with the corresponding plug increases the retention force between them.

(MDF76-30P-1 Plug mated with MDF76KBW or MDF76LBRW Receptacles.)

#### 4. Incorrect insertion prevention

Built-in polarizing features prevent reverse insertion of the plug in the receptacle.

#### 5. High board retention force

Metal shell is soldered directly to the PC board.

#### 6. RoHS compliant

All components and materials comply with the requirements of EU Directive 2002/95/EC.

### ■ Applications

Notebook computers, desktop computers, Liquid Crystal Panels, LCD monitors and other devices requiring discrete wire connections with a low-profile high performance connectors.

### ■ Incorrect insertion prevention

A vertically asymmetrical key form prevents reverse insertion.

## ◆ Usage Recommendations

<p>1. Recommended temperature profile</p>	 <p>Note 1: Up to 2 cycles of Reflow soldering is possible under the same conditions, provided that there is a return to normal temperature between the first and second cycle.</p> <p>Note 2: The temperature profile indicates the board surface temperature at the point of contacts with the connector terminals.</p>
<p>2. Recommended manual soldering</p>	<p>300±10°C for 3 seconds</p>
<p>3. Recommended screen thickness and open area ratio</p>	<p>Thickness: 0.15 mm Open area ratio: 100%</p>
<p>4. Board warpage</p>	<p>Maximum of 0.03 mm at the connector center, with both ends of the connector as reference points.</p>
<p>5. Cleaning conditions</p>	<p>Refer to "Nylon Connector Use Handbook".</p>
<p>6. Wire preparation and contact crimping</p>	<p>Refer to "Nylon Connector Use Handbook". The crimp contact termination must be performed using specified tools. All dimensions and crimp conditions are listed in applicable Crimp Condition Table and Crimping Quality Standards Manual.</p>
<p>7. Crimped contact extraction</p>	<p>■ Insert the contact retention tool in the insulator body and carefully lift the molded-in retention tab while pulling on the wire at the same time (Fig. 1). Do not deflect the molded-in retention tab more than is needed to release the contact. The tab should return to its initial position after the contact is removed.</p> <p>Note: If the tab is not returning to it's initial position carefully push it back before inserting the crimped contact. Permanent breakage of the molded-in retention tab will require replacement of the entire plug.</p>  <p><b>Figure 1. Contact Extraction</b></p>

<p>8.Crimped contact insertion</p>	<p>Contact must be inserted horizontally oriented as shown on Fig. 2                  Do NOT attempt to insert crimped contact in any other direction.</p> <div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 10px auto;">Horizontal insertion !</div>  <p style="text-align: center;"><b>Figure 2. Crimped Contact Insertion</b></p>
<p>9.Connector mating / unmating</p>	<p>Mating / unmating of the connectors should be done in the direction parallel to the receptacle's mounting surface. Do not attempt to mate/unmate in any other direction.                  Note: The connectors will self-guide themselves within the 20° angle, as shown in Fig. 3.</p>  <p style="text-align: center;"><b>Figure 3. Angular mating / unmating</b></p>
<p>10.Precautions</p>	<p>Do not mate / unmate the connectors when the receptacle is NOT mounted on the PC board.                  Differences in color shade of molded components will not affect form, fit or function.                  Contact HRS if additional information is required.</p>
